Name: Diya Payal

Registration Number: 25BAI10593

Branch: AIML

Year: 2026

Course Code: CSA001

Date: 26.03.26

INTRODUCTION

This project focuses on developing essential digital literacy skills required for students in today's digital environment. As a Student Digital Ambassador, the objective was to create awareness and understanding of digital tools, online communication, and cyber safety among peers. The project includes multiple practical tasks such as designing an infographic, building a professional online portfolio, exploring coding and collaboration platforms, learning email etiquette, and understanding cybercrime prevention. Each task helped in gaining hands-on experience with commonly used digital platforms and tools. This portfolio not only highlights technical skills but also emphasizes responsible and safe online behavior. Overall, the project aims to prepare students for academic and professional success in a digital world.

Task 1:

For Task 1, I created a digital literacy awareness infographic using Canva, a free and easy-to-use design platform. The infographic was designed as a single-page visual resource to help students understand the importance of digital literacy in their daily academic and personal lives. It covered important topics such as the meaning of digital literacy, useful digital tools, safe internet practices, professional online presence, and email etiquette. To make the infographic engaging, I used icons, color-coded sections, and short, clear points instead of long paragraphs. This helped in presenting the information in a visually appealing and easy-to-understand manner. The goal was to ensure that students can quickly learn key digital concepts by simply viewing the infographic.
One challenge I faced was balancing the design and content. Initially, the infographic looked cluttered due to too much text, so I had to simplify and organize the information properly. This task helped me improve both my creativity and my understanding of digital awareness.

Task 2:

For Task 2, I created and updated my digital portfolio using platforms such as GitHub, LinkedIn, and Kaggle. These platforms are widely used by students and professionals to showcase their skills, projects, and academic background. On GitHub, I created a profile README to introduce myself, including my branch, year, and learning goals. This helped me understand how developers present their work online.

On LinkedIn, I completed my education section by adding my degree, institution, and expected graduation year. This platform is useful for building professional connections and exploring career opportunities. Kaggle introduced me to the field of data science and provided a platform to practise skills and explore datasets.

Each platform serves a unique purpose, and together they help in building a strong digital identity. Over the next four years, I plan to regularly update my GitHub with projects, use LinkedIn for networking, and explore Kaggle to improve my analytical skills. This task helped me understand the importance of maintaining a professional online presence.

Task 3:

For Task 3, I explored both coding practice platforms and cloud-based collaboration tools. I used HackerRank to practise coding and successfully completed a beginner-level challenge. This gave me a basic understanding of how coding problems are structured and solved, and how such platforms can help improve logical thinking and problem-solving skills.

In addition to coding practice, I created a Digital Literacy Awareness Quiz using Google Forms. The quiz consisted of five questions, including both multiple-choice and short-answer types. I also linked the form to Google Sheets to collect and analyse responses. This helped me understand how digital tools can be used for surveys, quizzes, and academic collaboration.

These platforms are highly beneficial for students. HackerRank helps in improving coding skills and preparing for technical interviews, while Google Forms and Sheets are useful for collecting data and working collaboratively. This task enhanced my practical knowledge of digital tools and increased my confidence in using them effectively.

Task 4:

In Task 4, I learned about professional email communication and online etiquette. I drafted two formal emails: one requesting an assignment extension and another applying for an internship. This task helped me understand how to structure emails properly using clear subject lines, formal greetings, polite language, and appropriate sign-offs.

I also created a social media checklist that highlights responsible online behavior. Through this task, I realized that poor communication, such as using informal language or unclear messages, can lead to misunderstandings and create a negative impression.

Overall, this task improved my ability to communicate professionally and made me more aware of the importance of digital etiquette in both academic and professional environments.

Task 5:

While working on Task 5, I was surprised by how common and convincing cyber frauds, especially UPI scams, have become. Many attackers use simple techniques such as fake messages, calls, or links to trick users into sharing sensitive information. I realized that even small mistakes, such as clicking on unknown links or sharing OTPs, can result in serious financial loss.
This task made me more aware of the risks associated with online activities. One important habit I will change is being more cautious while dealing with unknown messages or payment requests. I will always verify the source before taking any action and avoid sharing personal or financial details online. This awareness will help me stay safe and guide others as well.

CONCLUSION

This project provided a comprehensive understanding of digital literacy and its importance in today's academic and professional environment. Through the various tasks, I learned how to create digital content, build a professional online presence, use coding and collaboration platforms, communicate effectively through emails, and stay aware of cyber threats. Each activity helped me develop practical skills that are essential for responsible and effective use of technology. The project also improved my confidence in using digital tools and platforms. Overall, this experience has prepared me to become a more responsible digital citizen and will support my future academic and career growth.
